Dear parent,

Greetings to you!

Dear Parents,

Greetings to you!

As you are aware, CBSE has introduced Artificial Intelligence as an optional 6th subject. However, we at school have decided that from the next academic year all students will take up Artificial Intelligence as a Skill Subject in Grade 9 and 10 as it will foster critical thinking and improve their problem-solving skills. Learning about AI involves an understanding about how algorithms work, their limitations and their ethical implications. In today's digital age, it's essential for students to have a strong foundation in digital literacy. By learning about AI, students can develop a better understanding on how technology works and how it affects society. With the increasing demand for AI skills in the workforce, students who learn AI in high school can gain an early advantage and be equipped for future job opportunities.

Overall, teaching AI as a subject in high school can prepare students for the future and equip them the skills and knowledge needed to succeed in a world increasingly influenced by AI technology.

Best regards,

**Sd/- Principal**
